| Course Title | : Technology and Cultural Change |
| Course Code | : CLD9001 |
| Recommended Study Year | : 3 and 4 (proposed to be an advanced course) |
| No. of Credits/Term | : 3 |
| Mode of Tuition | : Lecture-Tutorial |
| Class Contact Hours | : 3 hours per week |
| Category-Cluster | : Science, Technology & Society / General Education: Category C |
| Prerequisite(s) | : None |
| Co-requisite(s) | : None |
| Exclusion(s) | : None |
| Brief Course Description | : This course introduces basic frameworks to enhance students' understanding of the complex relation between technology and cultural change. Emphasizing both socio-cultural perspectives on technology and the cultural impacts of technological development, the course will focus on such questions as: how does technology shape our cultural life, and what meanings do technological artifacts acquire in the process? How are these meanings produced and circulated in particular historical and social contexts? Do cultural factors affect the development of technology and, if so, how? |
| Aims | : <ol style="list-style-type: none"> 1. To provide students with socio-cultural perspectives on the role of technology and the impacts of technological development. 2. To sensitize students to the importance of the socio-historical and cultural contexts in which differing views of the role of technology are and have been developed. 3. To familiarize students with the value issues involved in various technological discourses and practices. |
| Learning Outcomes | : At the end of the course students will be able to: <ol style="list-style-type: none"> 1. identify major issues raised by techno-cultural change, in the past as well as the present (such as the transformation of interpersonal and social relations after the invention of the printing press, and the mobile phone). 2. show comprehension of the key arguments and methodologies for analyzing, evaluating and presenting data in academic writings on the cultural aspects of technological development. 3. recognize and be able to participate in key debates about values raised by various techno-scientific discourses and practices. |

- Indicative Content : Part I Understanding Technology and Culture
1. What is technology? What is culture? What is cultural change?
 2. The socio-cultural aspect of technological development (for example, the role of imperialism in railroad development and the impact of postmodern consumerism on the development of mobile technologies), and the technological aspect of cultural change (such as the role of print technology in the development of modern thought and the role of internet in the transformation of the modes of postmodern communication).
 3. Issues will be selected from some of the following fields: health, built environment, energy, information technology, media technology, biotechnology. Possible issues are: slim technology and body image; museums and the construction of history; household appliances and the gendered division of labor; car or bicycle? energy consumption and identity formation; mobile phones and the transformation of interpersonal and social relations; cameras, video, and the reproduction of memory; printing, libraries and the production of knowledge; genetic engineering and cloning technology.

Part II Linking Technology and Cultural Change

1. How do meanings become invested in technological artifacts, and how are these meanings created in particular historical and social contexts?
2. How are social structures, cultural and aesthetic conventions, and individual psychologies affected by technological development? Is our sense of identity shaped today by new technology and the uses we make of it?
3. Do cultural factors shape the development of technology? If so, how?

Teaching Method : Lecture (2 hours) and Tutorial (1 hour)

- Measurement of Learning Outcomes :
1. Short writing assignments (book reviews or article reviews) to measure students' understanding of the strengths and weaknesses of different methodologies, as well as their ability to comprehend and summarize key academic arguments about the social-cultural dimensions and impacts of technological development; (LO 2)
 2. Writing assignments (reviews and the term paper) and group presentations to measure students' competence in identifying meaningful issues in technology and cultural change, and the values and theoretical assumptions involved in various technological discourses and practices; (LO 1,3)
 3. Final examinations to measure students' ability in presenting a coherent argument that applies concepts and perspectives learned in the course to analyze socio-technical issues. (LO 2,3)

Assessment : Students are assessed on the basis of 70% Continuous Assessment and 30% Final Examination, with the following grade distribution:

| | |
|---|-------|
| Tutorial presentation | [10%] |
| Short assignments (book reviews or article reviews) | [30%] |
| Term paper | [30%] |

Important Notes:

1. Students are expected to spend a total of 9 hours (i.e. 2 hours of class contact and 7 hours of personal study) per week to achieve the course learning outcomes.
2. Students shall be aware of the University regulations about dishonest practice in course work, tests and examinations, and the possible consequences as stipulated in the Regulations Governing University Examinations. In particular, plagiarism, being a kind of dishonest practice, is “the presentation of another person’s work without proper acknowledgement of the source, including exact phrases, or summarised ideas, or even footnotes/citations, whether protected by copyright or not, as the student’s own work”. Students are required to strictly follow university regulations governing academic integrity and honesty.
3. Students are required to submit writing assignment(s) using Turnitin.
4. To enhance students’ understanding of plagiarism, a mini-course “Online Tutorial on Plagiarism Awareness” is available on <https://pla.ln.edu.hk/>.
