What is the best fittingness-first account of welfare? And is this account plausible? To answer these questions, I begin with existing fittingness-first accounts of welfare, arguing that they face insurmountable difficulties. But their failures are instructive. The lessons they teach point toward a more plausible account. On this account, put roughly, what it is for something to be prudentially good for you is for it to raise the strength of the desire it is fitting for you to have toward occupying your phenomenal perspective.

All are welcome
